

Shaping Energy Waves

LEANFA designs and builds Solid-State Microwave and Radiofrequency Generators and Systems for applications in the **Industrial, Scientific and Medical** (ISM) fields. Our modular and scalable arrays of generators, supervised by a distributed-intelligence control system, allow to implement accurate self-adaptive processes capable to forge optimized applications with unaltered performance and minimum maintenance burden throughout their extensive life cycle.

LEANFA is also an officially validated designer and supplier of medical-grade devices compliant to MDR and FDA regulations, providing full hardware and software design support and guaranteeing accurate documental tracking for trouble-free certification processes.

The deeply focused technical skills of our passionate team are accompanied by a strongly reliable organization.

***LEANFA** is member of the **Muegge Group** and operates along the safe paths of international certifications: AEOF, ISO 9001 and ISO 13485. Solid know-how and flexible attitude towards continuous improvement are our milestones for an enjoyable customer experience.*

SOLID-STATE MICROWAVE TECHNOLOGY
DESIGNED AND MADE IN ITALY

OUR PRODUCTS AND SERVICES

Solid-state microwave and radiofrequency generator modules for medical applications

Laboratory engineering kits for boosting technology assessment

Flexible software platforms for custom systems development

Technological partnership for microwave and radiofrequency integration

Microwave power amplifiers and generators for industrial applications

Modular and scalable high-power microwave systems for new industrial plant development

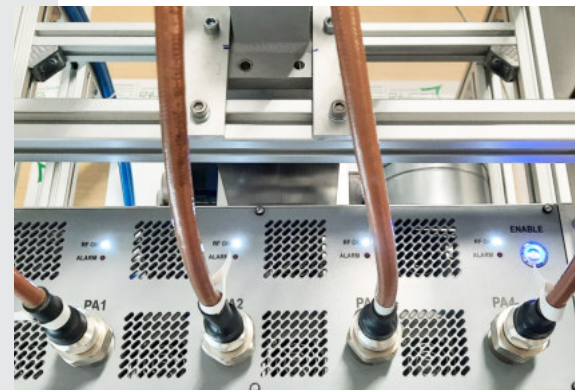

Medical-grade devices design and development with full certification support

Custom generators for laboratory experimental research

Consultancy about microwaves and radiofrequency adoption in new designs

**The right amount of energy
at the right place
at the right moment**
